Test

Overview

This document provides a step-by-step guide to integrating Test with **Voila**.

The Test courier is a dedicated courier option designed specifically for testing purposes. It enables you to configure and utilise it when dispatching simulated or mock orders.

Follow these instructions to integrate Test into your system:

1. Begin by **navigating** to the left panel and hovering your cursor over "API Accounts."
2. **Click** the plus icon to initiate the setup process under your preferred API Account.
3. In the first row, **choose** "Test" from the list of available options.
4. The following fields are required for setting up Test integration:
   - **Company**: **Enter** any identifier you prefer.
   - **Testing**: This is a simple **yes or no** selection. If enabled, the information will not be transmitted to the courier through their API, making it suitable for testing.
   - **Username, Password**: When setting up this courier, you can **employ** any credentials you choose, as the system will accept them without restriction.
   - **Notes**: Use this field to **enter** relevant information or notes regarding this courier. It will only be visible to you.
5. To complete the setup, **click** on "Save Changes."

By following these steps, you will successfully configure the Test integration with your **Voila** account.
